

Andrzej Zbieć: Selected Requirements of the TSI Loc&Pas in the Design of Modern Railway Vehicles

In this paper there are presented selected new requirements for rolling stock design, fulfilling of which is necessary for the vehicles that comply with the TSI Loc&Pas specification. On the one hand these requirements cause the necessity of implementing by the vehicles manufacturers and their subsuppliers new design solutions or modification of previously applied ones, and on the other hand they contribute to improvement of modernity of rail vehicles and improvement of safety level.

Keywords: rolling stock, interoperability, the TSI
