

Janusz Poliński: Elements of Tactile for the Blind – Types, Solutions and General Requirements

This monograph presents rules of using tactile elements – warning panels, guiding paths and tactile maps in different countries. Not only existing solutions were described, but also their advantages and disadvantages. Legal bases of their design were analyzed. Collected evidence enables to draw conclusions of strategic nature in area of good practice concerning tactile elements for the blind.

Keywords: disabled passenger, availability of rail transport, tactile elements
